

Here comes LSP as a game changer

- A q-q softer 3Q26 net profit to be followed by stronger 4Q26-2027
- LSP is a game changer by mid-2027
- Maintain BUY and a SoTP of THB296

Expect a q-q softer 3Q26

While 3Q26 net profit is projected to decline to THB0.5b, down from THB11.5b in 2Q26 and up from a core net profit of THB3.1b in 3Q25 (excluding gain from divestment). The q-q weaker profit in 3Q26E reflects the normalizing chemical margins from the peaks in 2Q26 and the higher feedstock cost as a result of the continued supply disruptions in the Middle East. The q-q lower dividend is another drag for the q-q decline in 3Q26 net profit.

A better business model warrants SCC's valuation

SCC's quarterly net profit will remain under pressure on the chemical margin volatility, caused by the uncertainties of both supplies and demands arising from the U.S.-Iran war. Yet we think SCC has proven its capability of incessantly improving the business model via 1) superior cost control for energy by replacing coal and gas with biomass and solar; 2) successful procurement of naphtha feedstock from other non-Middle East sources that eventually enables SCC to restart its previously shut ROC unit; 3) the earlier-than-expected start-up of ethane feedstock to begin in mid-2027, a 6-month earlier from 4Q27.

LSP could be a "game changer" for SCC in 2027 onwards

We highlight that SCC is now poised to see a significant improvement in the financial performance of its chemical business, specifically for its LSP cracker in Vietnam. Since its mothball in 2Q26 due to the uncompetitive cost structure for the hiking naphtha feedstock, SCC has accelerated the start-up schedule for its ethane feedstock, whose cost is USD200/t lower than naphtha's. By beginning to deploy ethane as a feedstock for LSP up to 6 months earlier, we estimate that SCC could not only structurally turn around but also create a more competitive olefins production plant that could generate an annual net profit of THB5-10b, a marked jump from a current annual THB12b net loss.

A sustainable earnings contribution from non-chemical units

SCC's non-chemical unit is projected to see strong earnings contributions to SCC, led by solid profits from SCGP, SCGD, and SJWD, and SCC's cement and building material unit, thanks to Thailand's continued strong demands from the large and incessant FDI influx. We expect an aggregate net profit contribution from non-chemical businesses to range between THB6b-THB9b a quarter.

BUY this "superior" business model and profit play

We recommend BUY on weakness on the softer 3Q26 result ahead of stronger 4Q26 net profit that should continue into 2027. We believe SCC's share price will stay on its "rerating" trajectory in the next 12 months, supported by its visibly improving business model.

RECOMMENDATION STRUCTURE

Stock Recommendations

Stock ratings are based on absolute upside or downside, which we define as $(\text{target price}^* - \text{current price}) / \text{current price}$.

- BUY:** Expected return of 10% or more over the next 12 months.
HOLD: Expected return between -10% and 10% over the next 12 months.
REDUCE: Expected return of -10% or worse over the next 12 months.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Sector Recommendations

- Overweight:** The industry is expected to outperform the relevant primary market index over the next 12 months.
Neutral: The industry is expected to perform in line with the relevant primary market index over the next 12 months.
Underweight: The industry is expected to underperform the relevant primary market index over the next 12 months.

Country (Strategy) Recommendations

Overweight: Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral: Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight: Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
